DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-5, drawn to a preparation comprising at least one diformate.

Group II, claim(s) 6-8, drawn to a process for producing coated preparations comprising mixing diformate and appropriate materials and a coating material.

Group III, claim(s) 9, drawn to a process for producing coated preparations by combining diformate in a melt of suitable coating material.

Group IV, claim(s) 10, drawn to a process for producing coated preparations containing diformate by emulsifying in an aqueous solution of a protective colloid and subjecting it to spray drying.

Group V, claim(s) 11, drawn to a process of producing a coated preparation in which diformate is coated by desublimation of the coating material..

Group VI, claim(s) 12-13, drawn to the use of a preparation containing diformate as a premix in animal feed.

Group VII, claim(s) 14, drawn to a process for producing a feed and/or feed additive.

Group VIII, claim(s) 15, drawn to an animal feed containing diformate.

Group IX, claim(s) 16, drawn to the use of a diformate composition as a performance enhancer and/or growth promoter.

Group X, claim(s) 17, drawn to drawn to the use of a diformate composition as an acidifier.

Group XI, claim(s) 18, drawn to the use of a diformate composition as a preservative.

Group XII, claim(s) 19, drawn to the use of a diformate composition as ensiling agent.

Group XIII, claim(s) 20, drawn to the use of a diformate composition as a fertilizer.

The inventions listed as Groups I-XIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: As described within Johnsen et al. (US 6,132,796) a method for production of a feed for salmon using Na or K diformates is described, however the reference does not describe the same methods to make the animal feeds as within groups II-V (no mention of melt, emulsion or desublimation). Johnsen also does not describe using the preparations in any other aspect other than as a protectant for salmonides feed. Thus applicant's claims do not relate to a single special technical feature.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James W. Rogers, Ph.D. whose telephone number is (571) 272-7838. The examiner can normally be reached on 8:30-5:00.
